On Documentation

Let's assume we implement an *immutable linked list*. The main class is called `Chain` and defines the following functions.

```scala
sealed trait Chain[+T] with Serializable { self =>

    …

    override def size: Int = …

    def drop(n: Int): Chain[T] = …

    def map[B](f : T => B) : Chain[B] = …

}
```

Think about your solution to implementing *map* on an *immutable linked list*!
